

# ECO ARCHITECTS PIDCOCK

## **PIDCOCK - Architecture + Sustainability**

is focused on desirable, sustainable architecture.

Our practice aims to excel in ecologically sustainable design, documentation and advice.

We aim to demonstrate how the many issues that are essential to such architecture can be potent influences in design and can produce truly delightful experiences. We respond creatively to the particular issues of each project, especially the client needs and the site environment. PIDCOCK - Architecture + Sustainability is inspired by the possibilities of resolving them in an ecological way.

Established in 1992, the practice formerly known as Caroline Pidcock Architects rebranded as PIDCOCK - Architecture + Sustainability in 2008. This was done to reflect the diverse experience that we have and wide ranging services that we offer. The company has developed into an extremely efficient and

effective practice that is very people orientated.

Our experience has been based in many different projects – especially homes – across Sydney and NSW. The quality of this work is reflected in the strong client referral base and in the extensive press coverage it has received. Our clients are from many different walks of life and demographics, enriching our understanding of their concerns and the opportunities their projects can provide. Working with existing buildings is a key part of our work. Not only is improving the sustainability of the existing building stock crucial to a successful low carbon future, it is exciting to have the cultural heritage of the past enrich our future.

There is much more information about the work we have done, the services we offer and many other aspects of our great team and their interests available at [www. pidcock.com.au](http://www.pidcock.com.au).
